## SensoNODE Starter Kit for Condition Monitoring

### Problem

The customer's system for condition monitoring required each condition to be monitored separately.

To simplify the process, the customer was requesting a solution for monitoring mechanical counters, pressure, humidity, & temperature in one single system.

### Solution

Exotic presented the customer with a SensonNODE Starter Kit to replace their current condition monitoring system

The SensonNODE Starter Kit allowed the customer to combine all their condition monitoring processes into one system. It is also easily expanded on by purchasing various additional sensors.

The customer is now able to set priorities and focus on specific machines

#### Success Factors

The SensonNODE Starter Kit was the all-in-one condition monitoring system that the customer was searching for.

#### Customer Value

The SensonNODE Starter Kit simplified the process for the customer and allows them to set priorities to focus on specific machines.

### Featured Products

**SensonNODE Starter Kit** – The SensonNODE Starter Kit allows you to begin measuring and recording crucial data immediately. This provides a pilot of an IoT solution on your plant floor, and starts the process of implementing predictive, continuous condition monitoring.
