AUTOMATION & SUPPLY

## Replacing Antiquated Forging Presses

### Problem

The customer had antiquated forging presses that needed to be replaced with newer technology. The problem was that long-term employees with the historic knowledge of the equipment and process left the company and the remaining employees struggled to understand the hydraulic control of the press.

### Solution

Since Exotic was involved in previous machine upgrades and troubleshooting, the team had an abundance of knowledge and documentation on forging presses. They were known by the customers maintenance teams as the equipment experts so when it came time to design the hydraulic controls, they were able to provide a package incorporating current technology and provisions for future enhancements. Not only did Exotic supply the components, we also were on site to assist with installation and startup.

### Featured Products

- Custom HPU
- Hydraulic Filtration
- Hose and Fittings
- Custom Hydraulic Manifolds
- Sidener Safety Valves
- Parker KleenVent
- Parker Accumulators
- Parker Cylinders
- Bent Tube Assemblies

Success Factors	Customer Value
Exotic's team was able to replace the old machinery as well as leave the employee's feeling confident in using them.	The Customer received newer technology and now has knowledgeable employees to run the machines.
